

CONFIGURATION

SOCKET-X

„Just plug in“

How to create an ELEMENT ONE design-matching connector box? The answer is the unique SOCKET-X:

It is available in three different length and most versatile in terms of available sockets and interfaces for Audio, Video, Power, Ethernet and data. Simply make your choice.

The surface matches to your ELEMENT ONE monitor and microphone installation. It is available in countless materials, colors and coatings - and beautiful illuminated by the built-in LED light.

The SOCKET-X is equipped with an innovative magnetical multipart cover flap with integrated cable outlet.

The major advantage is the compact dimension. With its total (visible) width of only 100mm and an installation depth of max. 75mm the required space of the box is reduced to the minimum.

PROJECT NAME:

Please enter letter or function in the desired SOCKET-X - Please note the different space requirements

SOCKET-X is available in three different lengths: 170, 200 and 230mm. The assembly is carried out according to the desired functionality, that is: your needs. Make your choice.

Thats how it works:

For each configuration please use a configuration form. Please note: There are different sized connection components, which require different space in the grid of the SOCKET-X. For example, an HDMI port requires half a grid, but a VGA port requires an entire grid. In addition, the space requirement of a 230V power connection is even greater.

Now choose your desired surface: aluminum, stainless steel or design.

And finally: you can specify the total number of the SOCKET-X configured in this way in the appropriate place.

If your SOCKET-X should be part of a CONVERS installation, please indicate this in the appropriate field.
